FOR CHARITIES AND ALTERNATIVE PROVISION

Outcome measure analysis

Whether the change in your before-and-after scores is real, how large it is, and who it is happening for.

Who it's for

- Charities using wellbeing or progress measures such as WEMWBS, the Outcomes Star or their own scales
- Alternative provision and tuition providers recording SDQ, Boxall Profile, attendance or attainment at start and review
- Organisations whose funders ask for outcomes, not just numbers through the door

The question it answers

Did people's scores improve by more than chance and measurement error would explain, by how much, and does the change differ by group, programme or length of involvement?

What you get

- Change on each measure: the average change, how large it is in standard terms (effect size) and how sure we can be
- Reliable change: how many people improved, stayed the same or got worse by more than the measure's margin of error, where the measure supports it
- Who benefits most: change by group, site, programme or sessions attended, with small samples flagged
- Follow-up: how many people have both a start and a follow-up score, and whether those without one differ
- A 3–4 page report with charts and plain-English commentary, plus the workbook so you can rerun it next year

What I need from you

- Start and follow-up scores, entered into a scoring workbook I provide that runs on your own computer
- Which measure each score comes from, and when it was taken
- Any groupings to compare, such as site, programme or sessions attended

How it works

- 30-minute call to agree the measures and comparisons
- You run the scoring workbook and send me the summary tables it produces
- Report and workbook delivered within 10 working days
- One round of changes included

Example finding

The average wellbeing score rose by only a few points, which looked modest. But four in ten participants improved by more than the measure's margin of error, fewer than one in ten got worse, and almost all of the reliable improvement came from people who attended eight or more sessions.

Illustrative example only, not a client result.

£600–£950 fixed price

Depends on the number of measures and comparisons. Confirmed before work starts. Invoiced on booking, payable on delivery. No VAT is added.

Best time: At the end of a programme or grant period, or once at least 20 people have both a start and a follow-up score.

Your data. Scores never leave your organisation. The scoring workbook works out each person's change on your own computer and produces summary tables. I receive only those tables, and groups below a set size are combined or left out, so no figure points to one person. No names, codes or individual scores are sent. If you need analysis the summary tables can't support, we can discuss a pseudonymised route under a written data processing agreement.

Licences. You need to hold any licence or registration your measure requires, such as for WEMWBS, the SDQ, the Boxall Profile or the Outcomes Star. I analyse your scores; I don't supply the measure.

Next step: email **stephen@zktheory.org** with a line about what you need and when it's due. I'll reply within two working days with whether I can help and a fixed price.
